Quality and Environmental Policy Marinfloc

Marinfloc's mission is to help our customers get clean water overboard during the ship's lifetime. Therefore, Marinfloc provides the customer tools, knowledge and verification required to achieve this. The tools consist of systems and water purification products. Knowledge consists of training, support, service and engineering. The verification consists of collecting and analysing data from our systems on the market, sales of spare parts for our equipment and reporting systems that help customers in their environment and quality work.

Marinfloc works constantly:

- To have a good and close relationship with our customers.
- To offer the best possible service.
- To minimize and prevent pollution of soil, air and water in our operation.
- To propel the international environmental law in a positive direction in terms of ship emissions to the seas.
- To actively use our quality and environmental management system to drive us forward, and with this work actively for continuous improvement.
- To comply with applicable laws and requirements.
